**For Immediate Release:**

**May 5, 2020**

There are now over 1.1 million confirmed cases of COVID-19 in the U.S. and over 3.6 million cases worldwide. In Cape May County, 379 people have tested positive and 27 have died from COVID-19. With great sorrow the Health Department announces the passing of a 57-year-old male and a 62-year-old male from the Borough of Woodbine.

“Our thoughts are with the families,” said Cape May County Freeholder Jeff Pierson. “We know certain people are at higher risk of severe illness or death from COVID-19 including older adults and people who have serious chronic medical conditions.”

Disability alone may not be related to higher risk for getting COVID-19 or having severe illness. Most people with disabilities are not inherently at higher risk for becoming infected with or having severe illness from COVID-19. However, some people with disabilities might be at a higher risk of infection or severe illness because of their underlying medical conditions. All people seem to be at higher risk of severe illness from COVID-19 if they have serious underlying chronic medical conditions like chronic lung disease, a serious heart condition, or a weakened immune system. Adults with disabilities are three times more likely than adults without disabilities to have heart disease, stroke, diabetes, or cancer than adults without disabilities.

**Call your healthcare professional if you have concerns** about COVID-19 and your underlying health conditions. Stay up to date on the current situation as it evolves.
